#### Product Description:

The best way to remove paint overspray, tree sap, and other types of environmental contamination from paint.

Body Clay uses mild abrasives to exfoliate contaminants from the top of the paint surface. The puddy form allow the product to slide over the top of the paint surface and remove the contaminants without harming the paint.

We have 3 different types of Clay:

Dark Blue (Mild)  
Light Blue (Medium)  
Red (Aggressive)

Dark Blue is perfect for the DIY detailer. It is mild and can be used on soft black paint without leaving any marring.

Light Blue is our most popular grade. It will quickly remove medium to heavy contaminants while leaving only slight marring on the paint surface. Perfect for use when you plan on doing light paint correction and polishing.

Red is our most aggressive. This product contains abrasives that will quickly cut through even the most stubborn contaminants. It will leave the surface marred and should only be used when heavy paint correction is planned.

#### Advantages:

- ◆ Easy to use and economical
- ◆ Three grades to fit your needs
- ◆ Quickly removes all types of contaminants
- ◆ Very low residue
- ◆ Works in all types of weather
- ◆ Versatile

#### Part Numbers:

- ◆ Dark Blue (200 gram) # 22-100
- ◆ Light Blue (200 gram) # 22-110
- ◆ Red (200 gram) # 22-120

#### Directions:

##### By Hand:

1. Wash vehicle to remove dirt and loose contaminants. Rinse with water.
2. Spray a 2' x 2' section with Showroom Finish to create a slick surface for the clay to slide.
3. Use 1/3rd of the bar of clay and form it into a flat pad. Rub the pad over the surface using light pressure. The clay will pick up contaminants from the surface and trap them.
4. Once the 2' x 2' surface is smooth, mold clay again to create a new smooth surface and de-contaminate that section.
5. The clay will not knead well and fall apart when it is full of contaminants. (After a few cars) Just throw the clay away at that point and get a new piece of clay to continue.
